

CRIMECAST Reports

With a detailed, color-coded map and a spreadsheet of risk scores, users can identify potential asset protection concerns surrounding an address. A quick glance at the map shows the site in relation to its environment. The CRIMECAST Scores allow for an in-depth analysis of the overall crime risk.

CRIMECAST Scores

- A** The CAP Index Score represents the overall risk of crime at the address.
 - CRIMECAST Scores are based on a scale of 0 to 1000, with 0 representing the lowest risk and 1000 the highest – 100 is average.
 - A score of 600 is 6 times higher than average, and a score of 25 indicates that the risk is 1/4 the average.
 - Each CRIMECAST Report contains 72 risk scores provided for 3 geographic levels and 3 time periods:
 1. **National** scores provide the site's risk in comparison to the entire U.K.
 2. **Country** scores compare the site to the average risk of the country in which it resides.
 3. **Regional** scores compare the site to the average risk of the region in which it resides.
 4. **Past, Current and Projected** risk scores are provided to allow for trending.

CRIMECAST Map

- B** There are over 10,000 census wards in the United Kingdom. Each ward contains several thousand residents with similar socioeconomic characteristics. Every census ward is assigned a numeric risk score and a coinciding risk shading.
- C** The site map is color-coded to depict the level of risk within each ward and identify the potential origin of criminal behavior. CAP Index Score ranges are used to assign risk shading similar to that of the green, yellow and red color scheme found on a traffic light.
- D** A radius threshold analysis is used to determine a site's overall risk. The inner radius represents 1 mile or a population of 25,000, equaling 2/3 of the overall score. The outer radius represents 3 miles or a population of 100,000, providing the remaining 1/3. In addition to the 1:3 methodology shown to the left, a 2:6 methodology is also available. This methodology applies an inner radius of 2 miles or a population of 100,000 and an outer radius of 6 miles or a population of 400,000.

About the CRIMECAST Map & Scores (cont.)

CRIMECAST Scores

This page contains 72 risk scores provided for 3 geographic levels and 3 time periods.

- A** **National** scores provide the site's risk in comparison to the entire U.K. and are broken down by CRIMECAST Category. **Past, Current** and **Projected** risk scores are provided to allow for trending.
- B** **Country** scores compare the site to the average risk of the country in which it resides and are broken down by CRIMECAST Category. **Past, Current** and **Projected** risk scores are provided to allow for trending.
- C** **Regional** scores compare the site to the average risk of the region in which it resides and are broken down by CRIMECAST Category. **Past, Current** and **Projected** risk scores are provided to allow for trending.
- D** The **National Past, Current** and **Projected** risk scores for the CAP Index Score and each CRIMECAST Category are graphed in order to provide a visual representation of the site's risk pattern over an extended period of time.

Proximity Data

This page helps to identify potential targets, threats or other points of interest (POI) in a site's vicinity and is based on information supplied by external data providers. This assessment focuses on select POI categories that fall within the general headings of infrastructure, transportation and attractions.

A The map displays the closest point of interest from each POI category within a 6-mile radius of the site as listed in the table to the right. Points of interest that fall outside of the 6-mile radius are not displayed on the map.

B This table contains the name and location of the closest point of interest from each POI category. Additionally, the distance from the site to that point of interest is provided.
