CRIMECAST® BASIC REPORT

CRIMECAST® Reports indicate the likelihood of crime and loss occurring at any address in the United States, Canada, Mexico, and the United Kingdom. Each report includes CAP Scores designating the risk of crime as well as a detailed map depicting those risks within a defined radius around each location.

SCORING METHODOLOGY

This area indicates the scoring methodology being used. Reference the Appendix page for an explanation of the various methodologies.
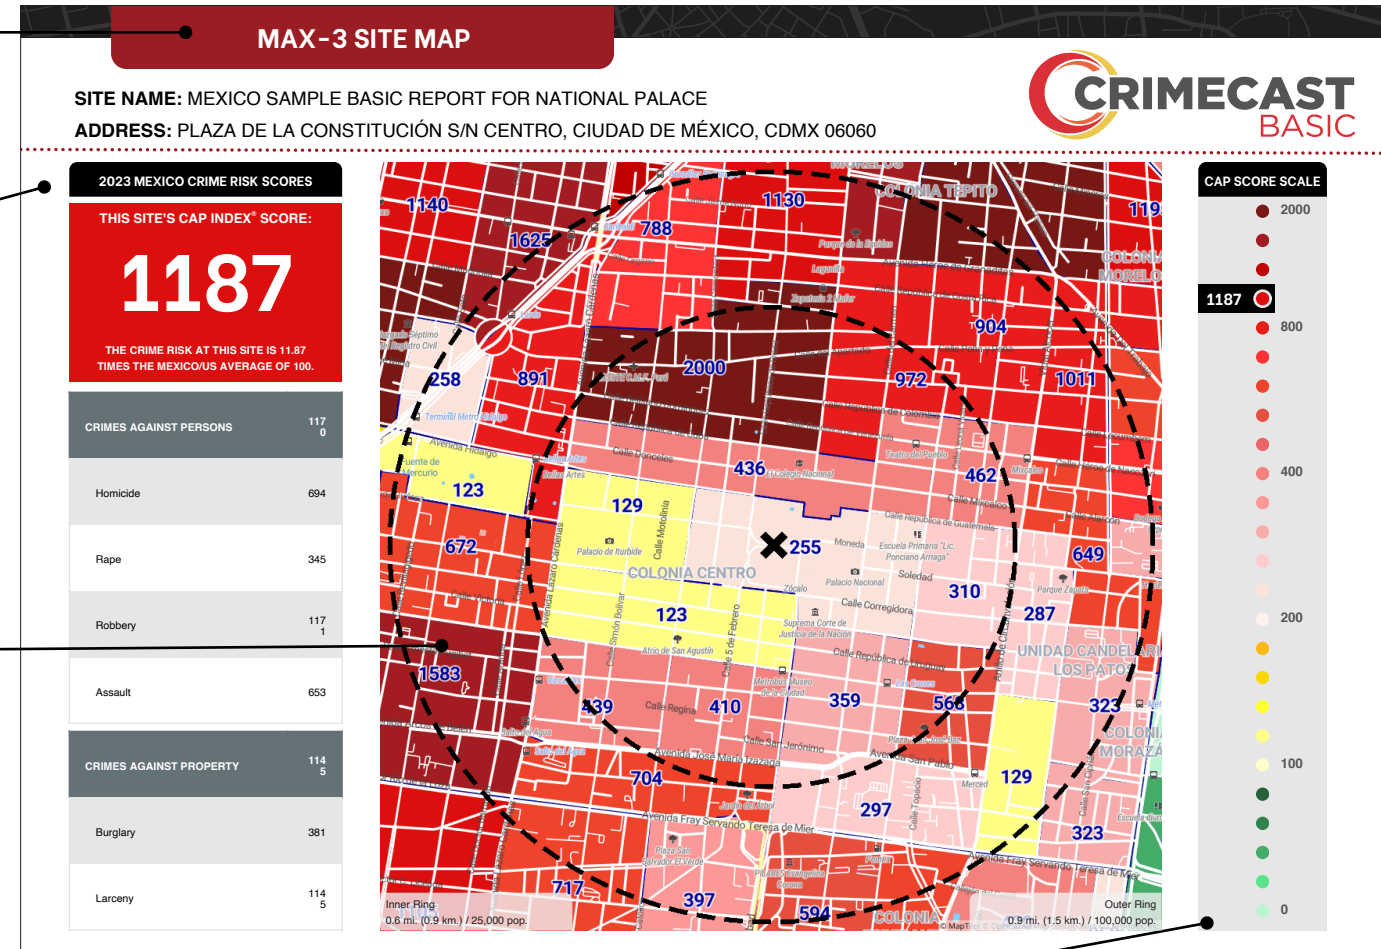

CAP SCORES

The **Mexico/US CAP Index® Score** indicates the overall risk of crime at the address.

The report also includes eight specific CAP Scores pertaining to **Crimes Against Persons** and **Crimes Against Property**, along with two **Supplemental Scores**.

CRIMECAST® MAP

INEGI defines over 132,000 Área Geoestadística Básica (AGEB) and equivalent units in Mexico. Each AGEB Equivalent typically contains thousands of residents with similar socioeconomic characteristics.

The **Site Map** shows the **AGEB-Equivalent** Score for each "neighborhood" surrounding a given location. The Site Map helps depict the potential origin of criminal activity occurring at the location.

Every AGEB Equivalent is assigned a numeric risk score and a corresponding risk shading.

ABOUT CRIMECAST SCORING

CRIMECAST BASIC

THE CAP INDEX® SCORING SYSTEM

The CAP Index® Scoring System uses sophisticated forecasting techniques that combine demographic and business statistics with crime and loss data to calculate crime risk. The foundation of our forecasting approach is the "Social Disorganization Theory," which asserts that higher degrees of social discord in a neighborhood tend to correlate with higher levels of crime.

SCORING METHODOLOGIES

CAP Scores for a specific business application are generated using one of four CAP Index® Scoring Methodologies. These scoring methodologies account for the fact that perpetrators often travel varying distances to commit crimes (the "journey to crime") depending on the target. The scoring methodologies also consider the nature and attractiveness of different types of targets for different types of crimes. Each methodology designates a progressively larger "sphere of influence" that is used to assess the risk of crime. Each sphere is defined by a maximum geographic radius or a population threshold. These spheres have different components that drive the overall crime risk score. The inner part of the sphere focuses on the nearest neighborhoods and receives the higher percentage of the weight. The outer part of the sphere considers more distant avenues of vulnerability and receives the remaining percentage of the weight.
